

GROUND LEVEL POOLS

When the top of the Filter Tank is placed at grade, and the pool edge is at grade, in-motion containment consideration is not needed. Size the system based on the gallons being pumped and the number of skimmers being used.

Select the Filter Tank and Component Package according to the pumping GPM:

1 The GPM to be pumped

2 The number of skimmers that will need to be installed
Note: for multi-pool levels see pages 94 and 95

SIZING TABLES | GROUND LEVEL POOLS

IN-WALL SKIMMER

MODEL: S6

GPM: 80

MATERIAL: 304 stainless steel
